

Viglen Omnino III Getting Started Guide

Before you begin

Please check that you have the following items before you start assembly:

monitor fixing screw (12mm)

Step 1: Monitor connection

Locate and remove the cable cover on the rear of the monitor. Lie the monitor face down and connect the VGA, power and audio cables in the cable recess. Replace the cable cover.

Step 2: Monitor fitting

a) Lift the monitor and slot the metal lugs at the rear into the four slots in the VESA bracket on the base unit.

b) Secure the monitor using the monitor screw provided.

Step 3: Remove the back cover

a) Slide the back cover removal clip to unlock the back cover.

b) Pull the top edge away from the base unit, then lift the cover vertically away from the base.

Step 4: Cabling

- Connect your external peripherals and cables inside the cable cavity. Connect the mains power supply cable.
- Unscrew the cable clip at the bottom of the cavity and arrange the cables behind it, taking care that all cables are routed smoothly.
- Replace the screw on the cable clip. Take care not to overtighten the screw or pinch the cables.

Step 5: Replace the back cover

- Line up the bottom of the back cover with the rear of the base unit. Make sure the locator pins at the bottom of the cover are inside the base unit surround.
- Close the top edge of the back cover until the removal clip locks into place.
- Fit the security screw into the removal clip (optional).

Features of your Omnino III

Viglen System Recovery Utility (Optional)

Under certain conditions you may need to reset the software originally installed on your computer to factory conditions, this can be put down to many different reasons, including the following:

- Accidental deletion of system files;
- Incompatible software has been installed;
- Incompatible changes to the system settings.

At Viglen, we understand that unless you have professional knowledge of computer systems, reinstallation can be a costly and time-consuming affair, especially for new users. This is why we have created the Viglen Recovery Utility System – designed to automatically reinstall your computer software quickly and efficiently.

Before proceeding with system recovery, please observe the following recommended guidelines.

- Back up all personal files to a CD or a suitable backup device before proceeding with the recovery procedure.
- Any subsequent software installed by the user must therefore be manually reinstalled. Please refer to the manuals that came with your software for installation instructions.
- Once initiated, all data stored on the system will be destroyed and will therefore not be recoverable.

Using the Recovery Utility

Please read the recommended guidelines above before continuing with the recovery procedures:

1. Shutdown your Viglen PC (if applicable) and switch off.
2. Insert the Viglen Recovery Utility CD into the CD-ROM drive.
3. Switch your computer back on. The Viglen Recovery Utility CD will now load.
4. When prompted, please type 'factory' and press the 'Enter' key to initiate system recovery.
5. A Windows style screen will now appear with two horizontal bars showing the status of the recovery sequence. Please wait while the procedure completes.
6. When prompted, remove the Recovery Utility CD from the drive and press a key to restart the computer.

Windows will now start up and you will be prompted to enter your User Information. Please refer to the Software Guide supplied with your Viglen PC.

Your Viglen Recovery Utility CD

WARNING: The Recovery CD should only to be used if your Viglen PC has become unstable or you have been advised otherwise by a member of Viglen technical support. You may lose personal documents and data when the CD is used.

We hope you will not need to use this utility, but in the unfortunate event that your system must be reinstalled, please keep this Getting Started Guide and the Viglen Recovery Utility CD in a safe place to help ensure a trouble-free recovery.

Contacting Viglen for help

Technical Support

If you have any queries concerning the following:
